

FirstTurnAfterCompaction[@t] StrFrag

// When Mark 3 emitted no summary row, the summary rides inside this turn's ask (in the code: the first surviving tail row). In both layouts below the ask is the STORED text: the merge rewrites the row and drops its as-sent sidecar, so the memory recall and plugin context sent live are gone.

◇ If `sys.summary_merged_into_first_tail_row[@t]`:

// The summary is pinned to the user role when the protected head is empty (every compaction after the first), when the head ends in a system row, or when no non-empty user row survives. Then it must open the message and the ask follows the end marker.

◇ If `sys.summary_role_forced_to_user[@t]`:

`sys.conversation_summary[@t]`

◆ SUMMARY_ENDS_HERE

`env.user_input[@t]`

// Otherwise the merge only serves alternation: the old ask stays first, labelled as prior context, and the summary follows it.

◇ Else:

◆ PRIOR_CONTEXT_HEADER

`env.user_input[@t]`

◆ MERGED_SUMMARY_DELIMITER

`sys.conversation_summary[@t]`

◆ SUMMARY_ENDS_HERE

◇ Else:

Frag `InputMemoriesAndPlugins[@t]`
